

H Numbers and Numerals

H4 Matching Numbers

Skills practiced: recognizing numerals;
counting; concentration.

Needed for each participant:

- a set of ten cards (or pieces of paper) with 1 to 10 written on them;
- about 55 stones (or nuts, shells, buttons, wads of paper . . .);
- the papers from last lesson with 10 animals drawn on them.

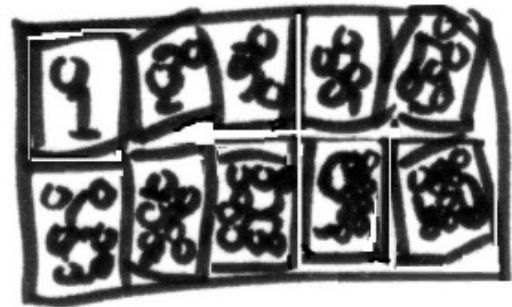

Activity:

Have the participants place the correct numeral on the right drawing of the animals.

Next, give everyone a handful of small stones (or other small item). Let them put the same amount of markers under or on the drawing and numeral (one bean by #1; 2 beans by #2).

During the process, walk around and give students help and affirmation.

Variation: if using small edible treats like nuts, raisins, or pretzels, at the end of the game, everyone may eat their treats.
